PROFESSIONAL PROFILE

I am a Disaster Management and International Diplomacy graduate, software engineer, and emerging humanitarian technology professional committed to strengthening disaster resilience through innovation. My work focuses on integrating artificial intelligence, digital technologies, and evidence-based disaster risk management to improve humanitarian coordination, transparency, and resource allocation. I developed an AI-powered resource management platform for humanitarian organisations to enhance accountability and support data-driven decision-making in humanitarian operations.

My professional experience spans emergency preparedness, humanitarian response, community capacity building, and backend software engineering, giving me a unique interdisciplinary perspective on addressing complex development challenges. I have coordinated emergency response activities, trained volunteers, students, and security personnel in disaster preparedness and first aid, and contributed to the design of scalable digital solutions that support humanitarian organisations.

My long-term ambition is to become a leader in humanitarian innovation, designing technology-enabled systems that strengthen disaster preparedness, climate resilience, and sustainable development across Africa. Through research, collaboration, and ethical leadership, I aspire to bridge the gap between disaster management and emerging technologies to create practical solutions that improve the lives of vulnerable communities.

CAREER VISION

I aim to pursue advanced study in **MSc Disaster Management** and deepen my expertise at the intersection of disaster risk reduction, sustainability, governance, and emerging technologies. My goal is to develop innovative, scalable, and inclusive solutions that strengthen institutional resilience and support vulnerable communities across Africa.

EDUCATION

Masinde Muliro University of Science and Technology Bachelor of Disaster Management and International Diplomacy <i>Second Class Honors (Upper Division)</i>	Oct 2013 – Dec 2017
--	---------------------

ALX Africa Certification in Software Engineering, Backend Software Development	Jan 2023 – Apr 2024
--	---------------------

EXPERIENCE

Back-end Software Engineer <i>Commudle Limited</i>	Jul 2024 – Present
--	--------------------

Key Responsibilities

- Design, develop, and maintain scalable backend applications.
- Build RESTful APIs and database-driven systems.
- Collaborate with multidisciplinary teams to deliver reliable software solutions.
- Improve system performance, security, and scalability.
- Participate in software architecture and backend design.
- Developed an ReliefTrack AI – AI-Powered Humanitarian Resource Management Platform that enables efficient tracking of humanitarian resource distribution, enhances transparency and accountability, and supports data-driven decision-making for improved programme delivery.

Emergency Response Analyst

St John Ambulance Kakamega

Apr 2018 – Apr 2022

Key Responsibilities

- Coordinated emergency preparedness and response activities.
- Conducted emergency data collection and incident analysis.
- Supported disaster preparedness planning and emergency operations.
- Assisted in coordinating humanitarian response during emergencies.
- Promoted community awareness on disaster preparedness and first aid.
- Led emergency preparedness and first aid training for volunteers.
- Trained students at the Kenya Medical Training College (KMTC).
- Conducted emergency response training for officers from the Administrative Police.
- Strengthened community capacity for disaster preparedness through practical skills training.

SELECTED INNOVATION PROJECT

AI-Powered Resource Management Platform for Humanitarian Organisations

I designed and developed an AI-powered digital platform to support humanitarian organisations in managing resources more effectively. The platform was created to improve transparency, accountability, and operational efficiency in humanitarian settings.

Key features and impact:

- Supports efficient tracking of humanitarian resource distribution.
- Enhances transparency and accountability in programme delivery.
- Enables data-driven decision-making for humanitarian operations.
- Improves resource allocation and reporting processes.
- Demonstrates the practical application of artificial intelligence in humanitarian action.

Technologies used:

- Python
- JavaScript
- C Programming
- SQL
- REST APIs
- Git & GitHub
- Linux
- Database Design
- AI System Development

LEADERSHIP & COMMUNITY ENGAGEMENT

- Facilitated emergency preparedness and first aid training programmes for community volunteers.
- Promoted community resilience through disaster risk awareness initiatives.
- Mentored volunteer emergency responders during training sessions and simulations.
- Advocated for preparedness as a key component of sustainable community development.
- Supported capacity building for students, volunteers, and security personnel through practical disaster response training.
- Demonstrated leadership through innovation, problem-solving, and service to vulnerable communities.

SKILLS

Disaster Management and Humanitarian Practice

- Disaster Risk Reduction
- Emergency Preparedness
- Humanitarian Response
- Incident Analysis
- Risk Assessment
- Community Capacity Building
- Stakeholder Engagement
- Project Coordination
- Public Speaking
- Research
- Communication

Technology and Software Development

- Backend Development
- AI System Development
- Python
- JavaScript
- C Programming
- SQL
- REST APIs
- Git & GitHub
- Linux
- Database Design
- Problem Solving
- Analytical Thinking
- Team Collaboration

RESEARCH & PROFESSIONAL INTERESTS

- Global Sustainability
- Climate Resilience
- Disaster Risk Reduction
- Sustainable Development
- Humanitarian Innovation
- Artificial Intelligence for Social Good
- Environmental Governance
- Community Resilience

- Digital Transformation for Development

LANGUAGES

- English – Fluent
- Swahili – Fluent
